LEARNING DIARY, MOBILE MODULE

LEARNING DIARY

18.12.2022

I set up my Android Studio and configured an emulator to test my application. Then I followed the first video tutorial and made a simple app that multiplies the two numbers introduced by the user. I also learned how to debug using the IDE.

19.12.2022

I completed the second tutorial and added a main view to my application. In it there is a button to go to the multiplier activity and a button to open a web page outside the app. Through this video I learn and understand the concept of activities and attempts.

20.12.2022

I completed the final tutorial and added a list view to my application. In it, I used custom display panels and added detail activities with different photos. Now my application is ready, with three different views, and different components, including a display information one.
